

System Architecture

WRITE PATH an interaction becomes a stored, versioned memory

committed rows

PostgreSQL 17 with pgvector

raw_events, chunks, memories, memory_versions, relations, traces
inverted index and vector index over the same rows, history never deleted

M1 Service and persistence

M2 Fine-tuned SLM extraction

M3 Hybrid retrieval

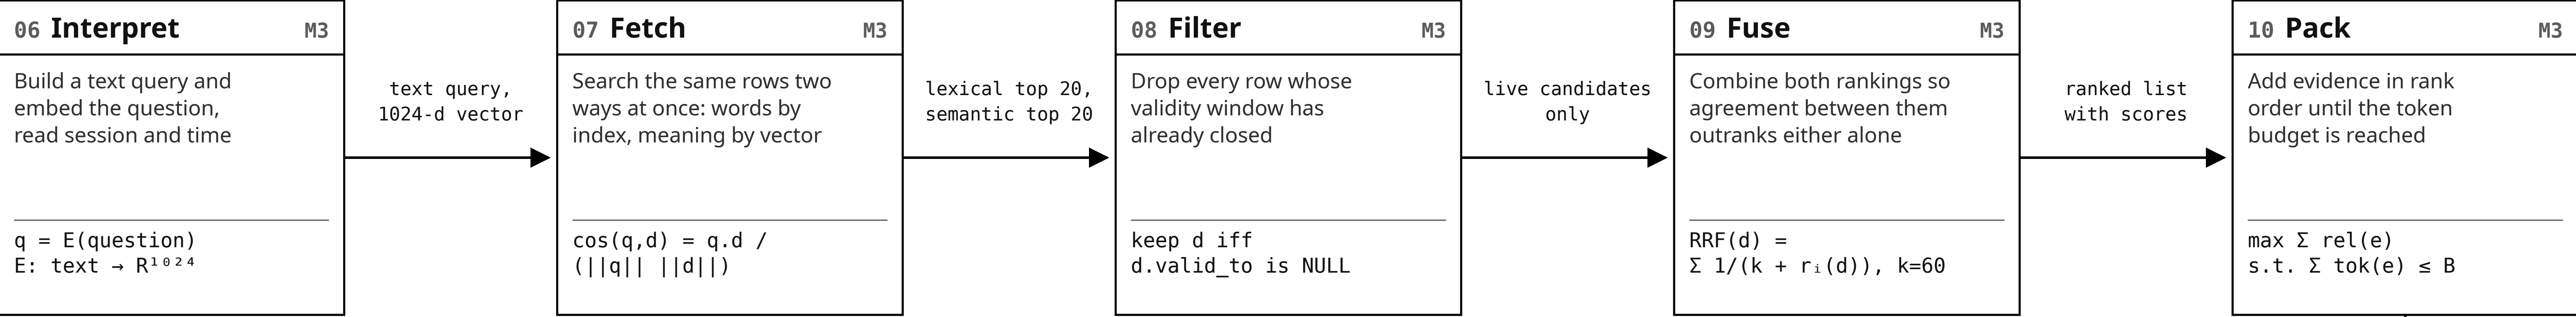

M4 Maintenance and evaluation

observes every stage above

one active version per claim

every row keeps its source chunk history is never deleted

READ PATH a question becomes cited evidence

Answer context

one entry per memory, each with its verbatim quote, timestamp and source id

at or below B = 1000 tokens
